Operating frequency (MHz)	UHF
Width (mm)	35
Height (mm)	62
Depth (mm)	10
Net weight (kg)	0.052

PRODUCT DESCRIPTION

GuideTour AT-R2 is a compact receiver that uses digital transmission technology. The device with a streamlined design can boast a range of about 100 meters, interference-free sound signal transmission and an efficient lithium-ion battery that allows you to work for more than 24 hours.

The AT-R2 front panel is equipped with a miniature display that informs the user about the selected channel, volume level, and battery status. The change of the parameters is possible thanks to three buttons located on the side of the receiver. The user has at its disposal 19 channels and 9 volume levels.

Weighing just over 50 grams, GuideTour AT-R2 is an energy-saving device - if a signal is not detected, the receiver automatically turns off after 10 minutes. The device can be charged via a mains charger or a dedicated charging case - charging time is about 4 hours.

Both the AT-R2 receiver and the AT-T1 transmitter of the Polish brand GuideTour are available at SQM Rental House.
