PRODUCT DESCRIPTION

The Brightsign HD1024 is a media player designed for digital signage solutions that will work equally well for any event requiring a 4K player with a range of features.

The Brightsign HD1024 supports 4K resolutions (4096x2160, 3840x2160 and 3840x600), Full HD, and also offers upscaling to 3840x2160 (24/25/29.97/30p). The player, in addition to supporting such codecs as H.265 (10-bit), H.264, MPEG-1, MPEG-2, WMV, supports HTML5, .bmp, .jpeg, .png image files and .mp2, .mp3, .aac, .wav audio files.

The enhanced player also boasts features such as AutoWall (the ability to create video walls), IP streaming, and the content itself can be flexibly "arranged" thanks to the ability to configure individual content areas on a single monitor. The BrightBeacon function, meanwhile, enables two-way communication between a mobile device and the monitor (via Bluetooth/Beacon), allowing you to manage the displayed content from your smartphone's position.

The HD1024 is equipped with a microSD card slot, USB port, HDMI 2.0a output, as well as three ports on 3.5mm jacks (RS-232, IR and audio output).
