Net weight (kg)	6
Set contains	Vista V2 license

PRODUCT DESCRIPTION

The Chroma-Q Vista EX is a control panel with 4096 channels that, together with Vista software, allows you to program and fully control the lighting at your event.

The panel is equipped with 12 programmable faders, 60 programmable buttons and 4 function keys - a total of up to 300 user-configurable actions per page. The possibilities are even greater with 8 encoders and 12 playback buttons.

The Vista EX control panel can be connected to a computer via a USB Type B connector, where it can act as an extremely powerful standalone controller thanks to dedicated software.

The rear panel of the unit features two 5-pin XLR (DMX, Neutrik) outputs, a 3-pin XLR socket for connecting a compact light, and a 4-pin XLR power input. Recommended by SQM Multimedia Solutions, the Chroma-Q Vista EX control panel is also convection-cooled, ensuring very quiet operation.
