

PRODUCT NAME

Holographic Videowall 3x3

DESCRIPTION

3D holographic wall is a set of advanced devices that create three-dimensional animations which give the impression of an object floating in the air. This wall consists of nine LED fans arranged in a 3x3 arrangement - three columns and three rows. This increases the projection area and allows you to display more realistic and effective 3D images.

You can use the video wall to display any content, such as advertisements, animations, product presentations, logos or other amazing visual effects.

Each LED fan consists of four arms, where each contains 240 LEDs, providing a resolution of at least 480x480 pixels. The LEDs display vivid colors, which creates the perfect impression in a video wall setup. For a 3x3 holo wall, the recommended minimum resolution of the material is 1440x1440 pixels, where the animation should be created in .mp4, .avi or .rmvb format.

The structure is made of durable metal, which ensures the stability and safety of the entire system. All structural components are carefully fitted together, which allows easy assembly and disassembly of the holographic wall. Each device in the system is installed so that some of the arms overlap - every second fan is mounted 20 millimeters apart to avoid collisions.

PRODUCT NAME

Holographic Videowall 3x3

DESCRIPTION (CONTINUED)

The holographic wall is controlled very easily and intuitively from both a computer and a dedicated Android/iOS app. The holographic system connects to the app via Wi-Fi (2.4GHz, 802.11b/g/n), which makes it easy to change and configure the animations displayed on the wall, as well as settings for brightness, angle of display or file splitting.

The 3D holographic wall with 3x3 LED fans can be used in various industries such as trade shows, events, exhibitions, digital signage solutions or education and entertainment. It's an ideal solution to attract customers' attention in an unusual way by showcasing new products, logos or other user interaction.

Rent a 3D video wall in a 3x3 configuration at SQM Rental House!

SPECIFICATIONS

Resolution (px×px)	1440x1440
Supported video formats	.mp4; .avi; .rmvb
Rotating speed (rpm)	700
Material	ABS; Aluminium
Viewing angles (h/v; °)	170/170
Max. brightness (cd/m²)	4500
Connectivity	WiFi 802.11b/g/n
Supply voltage	100-240V AC; 50/60Hz
Max. power consumption (W)	540
Working Environment	indoor
Width (mm)	1557
Height (mm)	1557
Depth (mm)	135
