

Holographic Videowall 2x3

TECHNICAL DETAILS

Resolution (px×px)	1440x960
Max. brightness (cd/m²)	4500
Viewing angles (h/v; °)	170/170
Supported video formats	.mp4; .avi; .rmvb
Rotating speed (rpm)	700
Material	ABS; Aluminium
Connectivity	WiFi 802.11b/g/n
Working Environment	indoor
Max. power consumption (W)	360
Supply voltage	100-240V AC; 50/60Hz
Width (mm)	1557
Height (mm)	1101
Depth (mm)	135

PRODUCT DESCRIPTION

3D holographic wall is a system of advanced equipment that creates three-dimensional animations that give the impression of projected elements floating in the air. This wall consists of six LED fans set up in a 2x3 configuration - three columns and two rows. This makes it possible to increase the projection area and allows to display more realistic and effective images in three dimensions.

Using the video wall, it is possible to project any content, such as advertisements, animations, product presentations, logos or other amazing visual effects.

Each LED fan consists of four arms - each containing 240 LEDs, thus providing a resolution of at least 480x480 pixels. The LEDs display vivid colors, which, when configured with a video wall, creates an excellent visual impression. For a 2x3 holographic wall, the recommended minimum resolution of the prepared material is 1440x960 pixels. The animation should be created in .mp4, .avi or .rmvb format.

The structure under the fans is made of durable metal, which ensures the stability and safety of the entire system. All structural components are carefully fitted together, allowing easy assembly and disassembly of the holographic wall. Each device in the system is further installed so that some of the arms overlap - every second fan is mounted on spacers at a distance of 20 millimeters to avoid collisions.

The holographic wall is controlled in a very intuitive way from both a computer and a dedicated Android/iOS app. The holographic system connects to the app via Wi-Fi (2.4GHz, 802.11b/g/n), which makes it easy to change and configure the animations displayed on the wall, as well as settings for brightness, angle of the display or splitting files.

The 3D holographic wall with 2x3 LED fans is perfect for many industries such as trade shows, events, exhibitions, digital signage solutions or education and entertainment. It's the perfect solution to attract customer attention in an unusual way by showcasing new products, logos or other user interaction.
