

PRODUCT NAME

Holographic Videowall 1x3

DESCRIPTION

3D holographic wall is a system of advanced equipment that creates three-dimensional animations which give the impression of projected elements floating in the air. The offered LED wall consists of three LED fans arranged in a 1x3 configuration - three columns and in a single row. The creation of the wall makes it possible to increase the projection area and allows to display more realistic and effective images in three dimensions.

With the video wall it is possible to display any content, such as advertisements, animations, product presentations, logos or other amazing visual effects.

Each LED fan consists of four arms - each containing 240 LEDs, providing a resolution of at least 480x480 pixels. The LEDs display vivid colors, which, when configured with a video wall, creates an excellent visual impression. For a 1x3 holographic wall, the recommended minimum resolution of the prepared material is 1440x480 pixels. The animation should be created in .mp4, .avi or .rmvb format.

The structure under the fans is made of sturdy metal, which ensures the stability and safety of the entire system. All structural components are carefully fitted together, allowing easy installation and removal of the holographic wall. Each device in the system is additionally installed in such a way that some of the arms overlap - every second fan is mounted on spacers 20 millimeters apart to avoid

collisions.

The holographic wall is controlled in a very intuitive way from both a computer and a dedicated Android/iOS app. The holographic system connects to the app via Wi-Fi (2.4GHz, 802.11b/g/n), which makes it easy to change and configure the animations displayed on the wall, as well as settings for brightness, display angle or file sharing.

The 3D holographic wall with 1x3 LED fans is ideal for many industries such as trade shows, events, exhibitions, digital signage solutions or education and entertainment. It is ideal for attracting customers' attention in an unusual way, showcasing new products, logos or otherwise allowing user interaction.

Rent a 3D video wall in 1x3 configuration at SQM Rental House!

SPECIFICATIONS

Resolution (px×px)	1440x480
Supported video formats	.mp4; .avi; .rmvb
Rotating speed (rpm)	700
Material	ABS; Aluminium
Viewing angles (h/v; °)	170/170
Max. brightness (cd/m²)	4500
Connectivity	WiFi 802.11b/g/n
Supply voltage	100-240V AC; 50/60Hz
Max. power consumption (W)	180
Working Environment	indoor
Width (mm)	1557
Height (mm)	645
Depth (mm)	135
