

PRODUCT NAME

ULTRASONIC ACOUstic SPAce DElimiter

DESCRIPTION

The ACOUSPADE ultra-directional speaker from British brand Ultrasonic Audiotechnologies is an innovative sound system that provides an experience comparable to headphones.

The speaker focuses sound in one direction, which makes it different from traditional speakers that scatter sound in all directions. The Acouspade™ acts as a sound reflector, allowing the creation of a personal sound zone and the simultaneous existence of different sound zones in the same physical space, eliminating the mixing and interference of different sound sources. The directional sound beam generated by Acouspade can penetrate noisy environments, providing the user with a headphone-like experience.

Features of the Acouspade Classic™ speakers include a spotlight mode, a shower mode (minimizes sound reflections and its sensation in different areas of the room, starting from the ceiling, bouncing off the floor and returning to the ceiling, etc.), and a virtual speaker mode (allows the speaker to be mounted in such a way that the sound appears to come from the object it bounces off, hiding the actual sound source from the user).

The Acouspade™ speaker provides precise sound distribution without distortion, even at high volume. The Acouspade Classic™ speaker's high-quality sound features low noise and a wide frequency

response, guaranteeing authentic reproduction of bass and low frequencies up to 150 Hz.

It's worth noting that the Acouspade Classic is a complete system that includes an amplifier and signal processing circuit, offering simple plug&play installation. Simply connect your audio source device (e.g., portable player, laptop, etc.) to the audio inputs of the speakers to enjoy great sound.
