Height without stand (mm)	90
Width (mm)	2000
Depth (mm)	1000
Net weight (kg)	32.5

PRODUCT DESCRIPTION

AluDeck Light is a modular stage platform suitable for creating stages, auditoriums, or podiums. Offered at SQM Rental House, the model is 2 meters wide and 1 meter deep, while the platform height is 90 mm.

There are two options of legs that can be installed for the AluDeck Light model:

- short legs with a height of 200 mm (which gives a total height of 290 mm); - adjustable legs with heights ranging from 600 to 1000 mm (giving a total platform height of 690 to 1090 mm).

The feet are made of rubber material, which further allows the platform to be statically located.

The platform is made on the basis of a lightweight aluminum profile, to which, moreover, it is possible to install accessories in the form of self-leveling cubes, railing and stair holders, as well as mounting cubes. The quality of the platform is confirmed by a TÜV certificate.

The platform's top is made of waterproof hexa birch plywood covered with an anti-slip layer in black.
