

PRODUCT NAME

PRESONUS STUDIOLIVE 16.0.2 USB

DESCRIPTION

PreSonus StudioLive 16.0.2 USB is a compact digital audio mixer offering 16 channels (8 mono channels and 4 stereo channels), a USB audio interface (18x16), 12 XMAX Class A preamps, as well as Burr-Brown AD/DA converters. The product is ideal for both professionals and audio enthusiasts.

In addition, this mixer also offers 4 line inputs that can be used to connect musical instruments or other audio devices. This gives users full control over their signals. The mixer offers one fader for each mono or stereo channel and one output for each bus.

One of the key features of the StudioLive 16.0.2 USB is the built-in USB audio interface, which allows the mixer to be easily connected to a computer. This makes it easy to record audio signals directly to your computer, which is ideal for music production, podcast recording or other studio applications. The StudioLive 16.0.2 USB also works with DAW (Digital Audio Workstation) software thanks to its built-in MIDI protocol, giving you even more control over your music production.

A built-in LCD display and intuitive knobs and buttons make operating the mixer a breeze. A stereo 31-band graphic equalizer has been placed on the sum. In addition - two 32-bit effect processors, where each of them has its own mixing bus and a set of dedicated presets.
