Connectors	1 x 3.5mm jack (Audio output)
Connectors	1 x Micro USB
Connectivity	Bluetooth 5.1
Width (mm)	54
Height (mm)	13.7
Depth (mm)	54
Net weight (kg)	0.2

PRODUCT DESCRIPTION

The Ugreen 40759 is a Bluetooth 5.1 audio adapter/receiver with aptX (aptX HD on the QCC3031 chipset) - the device enables fast connection and transmission of audio in the highest quality, additionally guaranteeing excellent music quality and virtually zero latency in audio transmission.

The adapter allows connection to audio devices via an AUX cable (3.5mm jack) or RCA cable. The device receives the Bluetooth signal and transmits it to speakers that do not have this function, allowing them to play music from your phone, for example.

The device is equipped with the latest Bluetooth 5.1 chip for high quality, lag-free audio transmission using the aptX and aptX HD codecs. It is fully compatible with previous versions of Bluetooth, which means you can even pair it with older phones or tablets without any problems.

Included with the receiver is a USB power cable. Simply plug it into any USB port or charger. In addition, a minijack-minijack cable is also included in the box.

Thanks to Bluetooth 5.1 technology, the connection is stable and uninterrupted within a range of 10 metres. So you can enjoy high quality audio transmission without worrying about interruptions. The outputs on the unit operate independently, so you can connect one device via the AUX connector and the other via RCA - the sound will be transmitted to both outputs simultaneously!
