

CHAINMASTER D8 PLUS ULTRA (250KG)

TECHNICAL DETAILS

Capacity (kg)	250
Speed (m/min; @50Hz)	4
Motor power (kW)	0.18
Chain length (m)	12
Load chain (mm×mm; EN-818-7)	4x12
Protection Level (IP)	IP55
Length (mm)	308
Width (mm)	219
Weight w/o chain (kg)	13
Weight with chain (kg)	18
Set contains	1x Case (2 units per case)
Set contains	2 x Steelflex sling 1T (1M)
Set contains	2 x Shackle 3.25T
Set contains	Power cable 15m/4pin

PRODUCT DESCRIPTION

ChainMaster D8Plus Ultra is an ultra-lightweight electric chain hoist designed for applications where low weight, reliability, and ease of operation are essential. With a lifting capacity of 250 kg and a lifting speed of 4 m/min (50 Hz), it delivers dependable performance while being the lightest electric chain hoist in its class. The D8Plus Ultra is equipped with a dual brake system, allowing loads to be safely suspended above working areas. Despite its compact dimensions, it delivers the reliability and performance expected from ChainMaster products, making it an ideal choice for trade shows, exhibitions, conferences, hotels, and any temporary event installation where minimising rigging weight is a priority. Weighing just 18 kg including the chain (13 kg without the chain), the D8Plus Ultra is lighter than many manual chain hoists, making transportation, installation, and day-to-day handling significantly easier. Its IP55 protection rating ensures reliable operation in demanding professional environments. The set includes two 3.25 t shackles, two 1 t (1 m) Steelflex steel slings, and a power cable, providing everything required for quick and efficient on-site installation. We also offer the Rack Motor Controller, available in 8CH and 24CH versions, for professional control of ChainMaster hoist systems.
