

PRODUCT NAME

P1.86 / LED SPHERE / 2M

DESCRIPTION

The P1.86 LED Sphere is a striking visual solution that brings a whole new dimension to your content. Its impressive 2-metre diameter and spherical shape instantly capture attention, creating a focal point for exhibition stands, events, showrooms and premium commercial spaces.

With a pixel pitch of 1.86 mm and a resolution of 3840 × 2160 px, the display delivers highly detailed images and crisp visuals. SMD technology supports both static graphics and dynamic video content. The spherical display surface opens up new creative possibilities for animations tailored to the screen’s shape.

At 2000 mm in diameter, this is the largest sphere that can be transported in one piece, without dismantling the structure into smaller sections. It can be mounted on a stand or suspended, allowing you to adapt the installation to the event and the layout of the space. The total height with the stand is 2300 mm, while the sphere itself weighs 450 kg, excluding the stand.

The combination of a large format, detailed imagery and a spherical shape makes this LED sphere stand out in any setting. It is an ideal solution for brands and creators looking to go beyond conventional screens and present their content in an engaging and memorable way.
