

PRODUCT NAME

DTS SCENA 1000

DESCRIPTION

DTS Scena 1000 is a theater light with a 150mm Fresnel lens that gives the opportunity to focus the light beam in a selected place. The device is equipped with one halogen CP70 bulb with a GX 9.5 lampholder, which power is 1000 watts and lifetime reaches 200 hours.

The lamp offers a beam angle in the range of 13 to 53°, so you can easily illuminate a large area, as well as focus on a particular detail. The angle is adjustable by a knob that is placed on the rear panel of the housing.

Thanks to the four-leaf barndoor (which is attached to the set), the user can precisely mask or narrow the selected area with a beam of light. It is also possible to adjust the beam size itself.

The Stage 1000 lamp offers a luminous flux of 25,000 lumens and a color temperature of 3,200 Kelvin (color of the photoflood lamp). The lens is protected by a solid grill, and the whole is built in high-quality housing that also gives easy access to the lens. The equipment operates at a rated voltage of 230V AC. The set also includes a 6/30 rope sling, a snap hook and an ABL rubber plug.

SPECIFICATIONS

Light source	1 x CP70 (GX9.5)
Power (W)	1000
Luminous flux (lm)	25000
Color temperature (K)	3200
Beam angle (°)	From 13 to 53
Supply voltage	230V AC; 50/60Hz
Width (mm)	260
Height (mm)	355
Depth (mm)	383
Net weight (kg)	6.5
