PRODUCT DESCRIPTION

Infinity S500 is a gaming computer equipped with a very good quality 3.0GHz Intel Core i5-7400 processor (or 3.5GHz in Turbo Boost mode), Intel H110 chipset and 8 gigabytes of DDR4 memory with an operating frequency of 2133MHz (with one free SO-DIMM slot enabling its extension).

The efficient NVIDIA GeForce GTX 1060 graphics processing unit with four available outputs on its housing - two DisplayPort and HDMI and one Dual-link DVI-D is responsible for a very good graphics experience. A very big advantage of the Komputronik system unit are two drives available to the user - one 120GB SSD flash, which is responsible for the fast work of the operating system, and another HDD with a fantastic capacity of 2TB, which allows archiving large multimedia resources.

The whole is enclosed in a Corsair Carbide Series 100R housing that combines classic design with efficiency - it is equipped inter alia with 8 USB ports (of which two 3.0 ports are on the front and four 2.0 and two 3.0 ports on the rear panel), VGA and DVI-D outputs, as well as a 120mm fan that monitors the temperature of all components accordingly.

We encourage you to check the availability of the Infinity S500 computer at SQM Rental House!
