

PRODUCT NAME

OCULUS GO

DESCRIPTION

SQM Rental House offers autonomous Oculus Go VR goggles, which are equipped with a 5.5-inch LED display and QHD resolution (2560x1440). The Qualcomm Snapdragon 821 octa-core processor and the Adreno 350 graphics processing unit are the heart of the hardware, and 3GB of RAM ensures smooth interaction with the virtual world. Oculus Go has 32GB of space, so it can store many movies, applications and VR games.

Oculus Go does not require any external device for further correct operation - it should only be initially configured via a smartphone in the Oculus application (iOS/Android).

To control Oculus Go goggles, there is an attached controller of compact size, which is characterized by intuitive trackpad and smooth gesture reconstruction.

Ergonomic goggles, covered with breathable fiber and molded foam, are comfortable to use (despite the weight of almost 0.5kg). They are equipped with a MicroUSB connector, which is also used to charge batteries with a capacity of 2600mAh, and a 3.5-mm mini-jack. The equipment supports Bluetooth 4.1 and WiFi 802.11b/g/n/ac standards, and is also equipped with a GPS module. Goggles have built-in speakers and a microphone.

SPECIFICATIONS

Panel	LCD
Resolution (px×px)	1280x1440 (per one eye)
Resolution (px×px)	2560x1440 (combined)
